ADUSA DELI KIOSKS UNDERGO SECURITY ASSESSMENT

Comprehensive Analysis and Remediation Ensure Secure Environment

Lombard, Ill. (August 11, 2008) – ADUSA, Inc. today announced it had recently concluded a joint effort to make its deli kiosks completely secure and hacker-proof. “Data security has become a very important issue for our supermarket clients. We recognize that, as customer facing technology, deli kiosks could be vulnerable to hackers with malicious intent. Because of this, we decided to undertake efforts to ensure that our kiosks are completely locked down, and are not, in any way, a security concern for the retailers that use them,” said Juan C. Perez, president of ADUSA, Inc.

ADUSA worked through one of its supermarket clients, which engaged a leading global technology company, to conduct the security assessment of its deli kiosks. The analysis involved conducting a series of tests in a way that replicates techniques used today by those who would attack such devices and attempt to subvert existing security controls. These tests were performed from the perspective of both an attacker with physical access to the device as well as someone attacking the device, remotely, over the existing network.

Added Perez, “Unfortunately, this is something that all providers of customer facing technologies have to be concerned with nowadays. Now that the assessment has been completed and we have resolved the potential trouble areas that were identified, our clients can rest assured that their deli kiosks are safe and not vulnerable to hackers.”
